

TRUE TRIAGE

Scan What Matters. Skip What Doesn't.

Traditional forensic tools image entire drives — a process that takes hours and requires expensive hardware. Scout takes a different approach: it targets only the specific locations where contraband, unauthorized access, and investigative leads are commonly found. The result is a triage scan completed in minutes that surfaces the evidence you need without the overhead you don't.

HOW IT WORKS

1

Connect Device

Plug in the target USB drive, external disk, or mount the computer.

2

Run Scan

Scout automatically scans browser history, hash databases, keywords, and media.

3

Review Results

Flagged items are organized by category with thumbnails and metadata.

4

Export Report

Generate a court-ready PDF report with all findings and hash verifications.

SUPPORTED DEVICES

- USB Flash Drives
- External Hard Drives / SSDs
- Mounted Computer Drives
- SD Cards & Memory Cards

WHAT GETS SCANNED

- ✓ Browser history & bookmarks
- ✓ Known contraband hash databases
- ✓ Custom keyword lists
- ✓ Image & video files (targeted paths)
- ✓ USB connection history
