

v0.5.0 — NOW AVAILABLE

# Digital Triage.

## Fast. Affordable. Field-Ready.

Purpose-built triage software for law enforcement. Scan targeted locations on USB drives, external hard drives, and Android devices — surface contraband, hash matches, and investigative leads in minutes, not hours.

**60 Days**

FREE TRIAL

**10-50×**

FASTER SCANNING

**3 Modes**

USB · ANDROID · DESKTOP

**Offline**

NO INTERNET REQUIRED

### CORE CAPABILITIES

10-50× FASTER

#### HASH VALUE MATCHING

Import ICAC or agency hash databases and cross-reference every file on a device. Parallel scanning across all CPU cores with memory-mapped file I/O — dramatically faster than sequential tools.

- MD5, SHA-1, and SHA-256 supported
- In-memory hash cache for instant lookups
- Smart file-size pre-filter skips non-matches
- Flagged files highlighted with full match details

#### BROWSER HISTORY ANALYSIS

Extract and analyze complete browser history from Chrome, Edge, Firefox, and more. Surface suspicious URLs, search queries, and browsing patterns without manual database parsing.

- Multi-browser extraction (Chrome, Edge, Firefox)
- Search term and URL pattern analysis
- Browsing timeline reconstruction
- Bookmarks and download history

#### MEDIA EXPLORER

Compiles all images and videos from known contraband locations into a visual thumbnail grid. Review hundreds of files in seconds instead of navigating folder trees manually.

- Image and video thumbnail gallery
- First-frame video previews without playback
- Filter by type: images, videos, flagged items
- Full-screen viewer with file metadata

#### KEYWORD SEARCH

Run custom keyword lists against file names, folder paths, and browser artifacts. Build per-case keyword sets targeting specific terms, usernames, or patterns relevant to the investigation.

- Custom keyword list import (.txt)
- Searches file names, paths, browser data
- Per-case keyword profiles
- Cross-referenced with other scan findings

#### INTRUSION DETECTION

Detect signs of unauthorized access — suspicious applications, remote access tools, encrypted containers, and artifacts indicating evidence of criminal behavior or anti-forensic activity.

- Encryption tool and container detection
- Remote access tool identification
- Suspicious application flagging
- Anti-forensic activity indicators

#### COURT-READY REPORTS

Generate comprehensive PDF reports directly from scan results. Every report includes evidence thumbnails, hash values, case metadata, and chain-of-custody fields ready for legal proceedings.

- Automated PDF with agency branding
- Evidence thumbnails + hash values
- Case info and examiner details
- Scan summary with statistics and timeline

#### USB & External Drives

Thumb drives, external HDDs, SD cards. Scan targeted directories where contraband is commonly stored — not the entire drive.

#### Android Device Triage

Connect via ADB and scan photos, SMS, browser data, and app artifacts. Extract evidence from mobile devices without a full extraction.

#### Desktop & Laptop

Scan the host machine's user directories. Identify browser history, media files, keyword matches, and hash hits on the investigator's own workstation.

## HOW IT WORKS

01

DOWNLOAD & INSTALL

Download the installer from DPScout.com. Run setup — no servers, no cloud config, no dependencies.

02

REGISTER AGENCY

Enter your agency details on first launch. Your 60-day full-access trial begins immediately. No credit card.

03

CONNECT & SCAN

Plug in a USB drive or connect an Android device. Select scan targets — hash lists, keywords, media — and hit Start.

04

REVIEW & REPORT

Browse flagged files, hash matches, and keyword hits. Generate a court-ready PDF report with one click.

## SCOUT vs. TRADITIONAL FORENSIC TOOLS

| CAPABILITY              | DATAPILOT SCOUT           | FULL FORENSIC SUITE     | MANUAL REVIEW      |
|-------------------------|---------------------------|-------------------------|--------------------|
| Time to first results   | 2-5 minutes               | 4-8+ hours              | Hours to days      |
| Training required       | Minimal — any officer     | Extensive certification | Forensic expertise |
| Hash database matching  | ✓ Parallel, 10-50× faster | ✓ Sequential            | ✗ Not possible     |
| Works offline           | ✓ Fully offline           | Varies                  | ✓                  |
| USB + Android support   | ✓ Both built-in           | ✓ With add-ons          | ✗ Manual only      |
| Court-ready PDF reports | ✓ One-click               | ✓ Complex workflow      | ✗ Manual           |
| Cost per seat           | Fraction of cost          | \$5,000-\$15,000+       | Staff time only    |

## WHY AGENCIES CHOOSE SCOUT

● Targeted, Not Exhaustive

Full forensic suites image entire drives — 4-8+ hours per device. Scout scans only the directories where contraband is actually stored. Get actionable leads in minutes while the full forensic image runs in the background.

● 10-50× Faster Hash Scanning

Parallel processing across all CPU cores. Memory-mapped file I/O. Smart pre-filtering by file size. Scout eliminates wasted computation before it starts — making hash matching dramatically faster than legacy tools.

● No Forensic Expertise Required

Designed for patrol officers, detectives, and SROs — not just lab technicians. Plug in a device, click Start, read the results. If they can use a web browser, they can run Scout.

● Two Deployment Options

**Desktop Edition** — install on any Windows 10/11 machine with full Android support. **USB Portable Edition** — boot and scan from a USB drive with no installation. Ideal for field work and shared workstations.

● Works Offline — Entirely

No cloud. No internet. No data leaves the machine. Scout runs 100% locally — critical for field work in rural areas and maintaining strict chain-of-custody requirements.

● Affordable for Every Agency

Enterprise forensic tools cost \$5,000-\$15,000+ per seat. Scout is built specifically for the triage workflow at a fraction of the cost — putting digital investigation capability within reach of departments of any size.
